

4.17 WOODWORK (444)

4.17.1 Woodwork Paper 1 (444/1)

1. (a)	<p>Advantages of water stain</p> <ul style="list-style-type: none"> - Penetrates the wood deeply – fade resistant. - Not necessary to seal water stains. - Takes away type of finish. - It is cheap. - It easy to mix thus come up with a certain colour. - Not inflammable. 	Any 2 x 1 = 2 marks
(b)	<p>Disadvantages of spirit stains</p> <ul style="list-style-type: none"> - Susceptible to fading. - They are expensive. - They are highly flammable - Difficult to apply with a brush. - May show overlapping brush marks. 	Any 2 x 1 = 2 marks
2. (a)	<p>Hand saws</p> <ul style="list-style-type: none"> - Tennon saws, dovetail saws, backsaw, rip saw, cross-cut saw, panel saw. 	Any 3 x ½ = 1½ marks
(b)	<p>Curve cutting saw</p> <ul style="list-style-type: none"> - Bow saw, coping saw, fret saw, compass saw, key hole saw. 	Any 3 x ½ = 1½ marks
3. (a)	<p>(i) Heart rot Decay caused by fungi near the heart of the living tree, it includes the pith and some of the true wood.</p> <p>(ii) Knots Occurs when a branch or a limb is cut through during the growth of the tree.</p>	1 mark
(b)	<p>Types of glue used for veneering;</p> <ul style="list-style-type: none"> - Animal glue - Synthetic resin - Casein glue - Contact or/impact adhesive - Polyvinyl Acetate (PVA) 	Any 4 x ½ = 2 marks
4.	<p>Safety when using power drill:</p> <ul style="list-style-type: none"> - Do not use switch box when hand drilling. - Make sure the job is secure and over a block. - Make sure the drill bit and chuck is securely tightened. - Allow the motor to attain full speed before commencing drilling. - Back the drill bit out of the hole frequently to remove chips. - Always drill away from the body. 	Any 4 x 1 = 4 marks

5.

Place the square against and edge known to be straight and mark a line. Then turn the square over. Any inaccuracy will show as a divergence of the line and the blade.

 Explanation = 2 marks
Total = 4 marks

6.

Toenailing is a method of driving nails, used when the end of the board meets the face of another board. It is advisable to always stagger the nails and angle to avoid nails hitting one another.

Sketch - 2 marks
 Label - 1 mark
 Explanation - 1 mark
Total - 4 marks

7.

The cap iron is fitted close to the cutting edge and the cutting iron is fitted with the beveled edge against the stock. This correct positioning of the cutting iron allows the shaving to immediately bend and break resulting in clean cuts.

The cap iron is fitted on the beveled side of the cutting iron. The shavings elongate and rip out of the surface of the board as opposed to being bent and broken resulting in rough cuts.

	<p>(b) Procedure of sharpening the cutting blade of a jack plane using an oilstone</p> <ul style="list-style-type: none"> - Mount the oil stone in a holder to keep it stationary. - Place the beveled portion of the cutting edge flat on a medium oilstone. - Move the blade in a figure eight or long oval pattern. - Remove the wire edge placing the blade flat against the oilstone and moving in a circular motion. - Use a fine oilstone to further hone the edge. - Test the blade for sharpness by making a slicing cut on a scrap board. 	<p>6 x 1 (6 marks)</p>
	<p>(c) Procedure of marking and cutting</p> <ol style="list-style-type: none"> 1 - Measure and mark the length of tennon using a pencil and try square. 2 - Divide the width of the piece into 3 equal parts and draw the lines to the length mark. 3 - Mark one face of the tennon using a try square. 4 - Turn to the other face and mark the mitre with the bevel square. 5 - Cut the face marked square and remove the waste. 6 - Cut the mitre and remove the waste. 	<p>6 x 1 = (6 marks)</p>
<p>14. (a)</p>	<p>(i) Public Sector: These are government owned organizations which provide services to the public. Examples: - Government ministries - Government agencies - The military - The National Police Service e.t.c.</p> <p>(ii) Private Sector These are organizations that are privately owned and not part of government. Examples: - Private corporations - Partnerships - Sole business e.t.c.</p>	<p>Explanation – 2 x 1 = 2 Examples Any 2 x ½ x 2 = 2 (4 marks)</p>

(b)	<p>(i) Name of device Cutting gauge, cutting board/mitre template</p> <p>(ii) Name of parts A – Stock B – Adjustable stopper</p> <p>(iii) Used when cutting many pieces of equal length.</p> <p>(iv) Safety precautions to observe:</p> <p>(i) Ensure that the device is held firmly on the working bench.</p> <p>(ii) Ensure that cutting is along the slot.</p> <p>(iii) Hold the stock firmly to avoid vibration.</p>	<p>(1 mark)</p> <p>(2 x 1 = 2 marks)</p> <p>(1 mark)</p> <p>(Any 2 x ½ = 1 mark)</p>
(c)	<p>Safety precaution to be observed while using a surface planes.</p> <ul style="list-style-type: none"> - Ensure no loose parts before you switch on the machine. - Remove all loose knots from the stock before surfacing. - Do not surface a stock less than 300mm long. - Never stand directly behind a board being surfaced. (stock could kick back). - Make sure one face is flat before you surface a board. - Do not adjust the tables when the machine is on. - Always use a push block. - Feed the stock along the grain. 	<p>(Any 6 x 1 = 6 marks)</p>
